PROFESSIONAL SUMMARY

Akhilesh is an information security practitioner currently working within DevSecOps. He focuses on securing software applications, cloud infrastructures, helping organizations build and maintain secure architectures. Akhilesh possesses expertise in secure code review and scanning tools like SAST, DAST, MPT, and SCA; security best practices throughout software development lifecycle (SDLC).

He has practical experience within network security and remains committed to expanding his knowledge in technological security advancements. He brings in the experience with integrated adversarial testing (Red Team) and defensive monitoring (Blue Team) into the AppSec strategy to validate security controls across the enterprise.

EXPERIENCE

Deloitte

Senior Consultant (Previously Consultant)

July 2022 - Present

Boston, MA

- Led enterprise AppSec strategy, standardising risk prioritiation and delivering a data driven remediation roadmap.
- Provided subject matter expertise for enterprise DevSecOps and AI AppSec initiatives; LLM Security and AIMLSecOps strategies, including selection and integration of advanced security tooling.
- Contributed to enterprise security risk and compliance by guiding cross-functional risk assessments and establishing governance artifacts to embed security into the SDLC.
- Conducted security compliance assessments and support security architecture requirements.
- Partnered with developers to embed security into design, build, and deploy stages utilizing Secure-by-Design (SbD) framework and facilitate audit readiness.
- Facilitated identifying, documenting, and embedding security controls into application/software design and contributed to data classification surveys, privacy impact assessments (PIA) and certification & accreditation (C&A) processes.
- Provided assistance and support to homegrown and custom developed vendor applications towards vulnerability management processes and risk remediation efforts.
- Collaborated with Governance Risk and Compliance (GRC) team to help develop and implement enterprise security standards, guidelines, and policies; ensuring compliance with industry standards and organizational objectives.
- Conducted research and developed an internal firm Generative AI-focused AppSec/DevSecOps framework, including a Proof of Concept (POC), to leverage key emerging technologies while utilizing core consulting skills.
- Developed deep understanding of pertinent security initiatives, frameworks to be a security subject matter expert and guide non-engineers and engineers stakeholders.
- Adept in creating knowledge assets, executive engagement packages and strategic artifacts for application security engagements and initiatives.

STRENGTHS

Certifications	Associate ISC2 (passed CISSP), CompTIA security+, Datadog log management & Kubernetes fundamentals
Tools	Pen Test, SAST, SCA & ASPM tools, Firewalls (Palo alto, PfSense), Open Source Security Tools
Cross-functional	System Administration and Network Security (Linux), threat modeling, Forensics (FTK, Autopsy, Wireshark)
Soft Skills	Written and verbal communication, Interpersonal, Critical thinking, Self-motivated

RECENT EDUCATION

Campbellsville University - [CPT Work Auth]

M.S. in Data Science and Artificial Intelligence

January 2025 - Present

University at Buffalo, The State University of New York

M.S. in Management Information Systems

Advanced Graduate Certification in Cybersecurity — National Security Agency (NSA) Validated

Research Aide — Research Foundation for SUNY

February 2022
